

Maintenance

Typical maintenance activities for shared use paths include:

- Mowing
- Blowing/sweeping
- Trash pickup/removal
- Vegetation management
- Trailhead and amenities clean-up
- Kiosk and sign repairs
- Asphalt inspection and drainage problem repair

Best Management Practices to reduce maintenance costs include:

- Install vertical root barrier fabric to prevent root damage to trail
- Remove roots from trail base during construction
- Plan sight distance clearing to be done during construction
- Plan for low water crossings rather than culverts
- Use sustainable building materials and local sources
- Design hardscapes under trail side amenities to eliminate need for maintenance
- Place 911 decals with GPS chips every quarter mile on the trail surface for reporting emergencies and location with smart phones

Are there any other best management practices to consider for CC2ST?
